## **Forming Lasting & Meaningful (Cold) Connections**

**Robert Dancik**

**August 2-4, 2010**

**9am to 4pm**

\$10 materials fee for a micro-fastener kit, payable to the instructor.

### Tools:

- Xacto or similar knife
- Files- needle files are OK however some larger files are needed the "cut" or coarseness should be medium (all companies have their own numbering system for coarseness)
- Wet or dry sandpaper (silicone carbide) grits – 320, 400 , 600
- Your favorite tools for whatever type of work you may want to pursue
- Paper and writing tools for drawing and notes
- Jeweler's saw and bench pin
- Saw blades 2/0 – 2
- Wire cutter
- 14, 16, 18 gauge wire – any type (need not bring all 3)
- Sheet metal – any type but not thinner than 24-gauge. You don't need much, just for making samples of some joins.

### Materials

- Playing cards – need not be a complete deck
- Partially finished pieces, fired metal clay pieces, found objects, the worst mistakes you have ever made in your studio
- Any materials, objects or "things" you may want to incorporate in your work. I really do mean anything; the class is about attaching anything to anything else.
- 1 pkg. or more of polymer clay Premo, Sculpey III or any other polymer clay is fine – 1 transparent/translucent, 1 black (this is optional but we may delve into how to use it for connections)

### Optional "stuff"

- 1 pkg. of 2 part epoxy – Devcon, Loctite, or similar available at Rio Grande, Home Depot, most hardware stores. Note\* don't buy the syringe type dispenser epoxy – the package is designed to yield bad results.
- Metal clay PMC+PMC3 or equivalents (only if you work in metal clay and want to pursue it in class- however, we will not be firing)
- Number 52, 54 ,56 drill bits available from Rio Grand or similar catalog
- Any paint you choose (acrylic will work best) in any colors you think you may want to use (you don't need much)
